

KEEP WORKERS SAFE WITH SOCIAL DISTANCING TOOLS

Is Your Manufacturing Environment Practicing Social Distancing?

BearCom can help your work teams communicate and keep their social distance, even when ambient noise can be a distraction. For almost forty years, BearCom's two-way radios and accessories have helped manufacturers deliver Just-In-Time efficiencies, maintain productivity and reduce downtime.

Minimizing Face-to-Face Communication in Your Facility with Two-Way Radios

BearCom's large portfolio of two-way radios enhance workers' safety, are easy to operate and provide crystal clear communications, with integrated voice and data capabilities available on many models.

BearCom works with manufacturers and distributors of all sizes to deploy the right solutions for single-site, multi-site, and wide area networks. We can help you meet or beat production deadlines with radios that deliver superior sound quality and extended range, durability and reliability, noise-canceling Intelligent Audio features, and advanced safety options.

Radios can even be programmed to receive auto alerts when production lines go down to immediately notify maintenance and management teams. **Consider having BearCom Engrave Your Radios to Avoid Cross-Contamination.**

Safety Tip: To maintain Social Distancing, instead of cramming people into an office or conference room, some plants are using two-radios for meetings.

Radio Accessories Enhance Safety, Clarity, and Ease of Use

While helping to reduce cross-contamination, the right radio accessories ensure your team gets the best communications performance with the greatest ease-of-use.

Headsets, earpieces, and remote speaker microphones enable hands-free operation. In addition, BearCom offers multiple headset configurations – including hearing protection ear muffs for high decibel noise attenuation in manufacturing environments. Consider dedicated accessories for individuals to minimize cross contamination.

Spare batteries ensure that radios are ready to deliver peak signal strength when they are needed most. Multi-unit chargers reduce electrical outlet demands and shelf space, allowing you to charge multiple units at the same time.

UPDATE:

SHARING IS NOT CARING

Don't Share. To avoid cross contamination, BearCom encourages you to avoid the practice of sharing devices and accessories during or between shifts. Radio accessories such as remote speaker microphones, earpieces and headsets are products we encourage you to consider personalizing to keep employees safe and from cross contamination.
